Profile

Linux-focused undergraduate maintaining a personal NixOS workstation, local NAS, and reproducible development environments. Seeking remote freelance contracts in Linux setup, service configuration, and automation while completing my BSc. I prioritize version-controlled changes, observable service behavior, and documented handovers. Available for scoped projects with agreed deliverables and schedules compatible with university commitments.

Technical skills

Linux systems	NixOS, Nix flakes, systemd services, journal-based troubleshooting
Infrastructure	Docker, Samba/SMB, Syncthing; networking and storage configuration
Automation	Bash, Python, Git, Make, GitHub Actions; reproducible development shells
Development	C/C++, SQL/PostgreSQL, command-line tools, modular configuration

Selected systems projects

Independent projects on personal infrastructure; source available for technical review.

Declarative Linux workstation & NAS

NixOS / Nix / Bash

https://github.com/4137314/nixos-config

- Maintain a modular NixOS configuration covering networking, storage, user environments, Docker, Samba shares, and Syncthing file synchronization.
- Use check/build/switch workflows, dry-run updates, and generation comparisons to review system changes; expose service status, failed units, and journal views through local tooling.

Reproducible CLI & database workspace

Nix / Python / PostgreSQL

https://github.com/4137314/hack-workspace

- Develop a Nix-based environment with a project-local PostgreSQL cluster, database lifecycle commands, and a Python CLI for authorized security-research workflows.
- Implement a PostgreSQL-backed job queue, structured JSON output, and diagnostic commands; keep active testing opt-in with explicit authorization scope checks.

Education

University of Trento

BSc in progress

Computer, Communications and Electronic Engineering — Electronics track (L-8).

Academic project work in digital architecture (VHDL, RISC-V), embedded C/C++, and hardware/software interfaces complements my Linux and systems work.
